## Practical-10

Orchestration of ML project containers using Kuberenetes

The objective of this lab is to introduce you to the fundamentals of orchestrating applications with Kubernetes. You will learn how to define, deploy, and manage containerized applications using Kubernetes manifests.

Lab Steps:

Step 1: Verify Kubernetes Cluster Ensure your Kubernetes cluster is up and running by checking the cluster nodes

```
PS D:\Desktop\stream> kubectl get nodes

NAME STATUS ROLES AGE VERSION

docker-desktop Ready_ control-plane 22m v1.27.2
```

Step 2: Define a Deployment using YAML manifest and apply the deployment to your cluster

```
deployment.yml
      apiVersion: apps/v1
      kind: Deployment
      metadata:
      name: ml-deployment
      spec:
        replicas: 3
        selector:
          matchLabels:
            app: ml-app
        template:
          metadata:
            labels:
              app: ml-app
          spec:
             containers:

    name: ml-container

              image: your-ml-image:tag
 19
               - containerPort: 8080
```

Apply the deployment:

```
PS D:\Desktop\stream> kubectl apply -f deployment.yaml deployment.apps/ml-deployment created
```

Step 3: Describe Deployment

```
PS D:\Desktop\stream> kubectl describe deployment ml-deployment
                       ml-deployment
Name:
Namespace:
                       default
CreationTimestamp:
                      Thu, 23 Nov 2023 18:58:29 +0530
Labels:
                       <none>
Annotations:
                       deployment.kubernetes.io/revision: 1
Selector:
                       app=ml-app
Replicas:
                       3 desired | 3 updated | 3 total | 0 available | 3 unavailable
StrategyType:
                      RollingUpdate
MinReadySeconds:
RollingUpdateStrategy: 25% max unavailable, 25% max surge
Pod Template:
  Labels: app=ml-app
 Containers:
  ml-container:
   Image:
                 your-ml-image:tag
                 8080/TCP
   Port:
   Host Port:
                 0/TCP
   Environment: <none>
   Mounts:
                 <none>
 Volumes:
                 <none>
Conditions:
  Type
                Status Reason
                False MinimumReplicasUnavailable
 Available
 Progressing
                True
                        ReplicaSetUpdated
OldReplicaSets: <none>
NewReplicaSet: ml-deployment-5fcc5656fc (3/3 replicas created)
Events:
  Type
                            Age From
         Reason
 Normal ScalingReplicaSet 24s deployment-controller Scaled up replica set ml-deployment-5fcc5656fc to 3
```

Step 4 : Expose Service

```
# service.yaml

1  # service.yaml

2  apiVersion: v1

3  kind: Service

4  metadata:

5  | name: ml-service

6  spec:

7  selector:
8  | app: ml-app
9  ports:
10  | - protocol: TCP
11  | port: 80
12  | targetPort: 8080
13  type: LoadBalancer
```

Step 5: Access the Service

```
PS D:\Desktop\stream> kubectl apply -f service.yaml service/ml-service created
```

Step 6: Scale Deployment

PS D:\Desktop\stream> kubectl scale deployment ml-deployment --replicas=5 deployment.apps/ml-deployment scaled

Step 7: Update Deployment

```
deployment-updated.yaml
     apiVersion: apps/v1
 3 kind: Deployment
     metadata:
    name: ml-deployment
     spec:
       replicas: 3
       selector:
 8
        matchLabels:
        app: ml-app
       template:
         metadata:
           labels:
           app: ml-app
         spec:
           containers:
           - name: ml-container
             image: your-updated-ml-image:tag
             ports:
             - containerPort: 8080
```

## Step 8: Rollout Status

PS D:\Desktop\stream> kubectl rollout status deployment ml-deployment
Waiting for deployment "ml-deployment" rollout to finish: 1 out of 3 new replicas have been updated...

Step 9: Rollback Deployment

PS D:\Desktop\stream> kubectl rollout undo deployment ml-deployment deployment.apps/ml-deployment rolled back

Step 10: Delete Resources

PS D:\Desktop\stream> kubectl delete deployment ml-deployment deployment.apps "ml-deployment" deleted
PS D:\Desktop\stream> kubectl delete service ml-service service "ml-service" deleted
